**Dear Hiring Manager,**

I am writing to express my strong interest in the Full-Stack Developer / Backend API Developer position. As a Full-Stack Developer with strong Backend/API engineering experience, I specialize in building robust Node.js/Express.js backend architectures, designing scalable REST and GraphQL APIs, and seamlessly integrating them with modern React.js and Flutter frontends.

Throughout my career, I have prioritized clean architecture, data security, and efficient deployment. In my recent roles, I have successfully designed relational and NoSQL databases (MongoDB, PostgreSQL), implemented strict Role-Based Access Control (RBAC) using JWT, and integrated complex third-party payment gateways and cloud services.

A prime example of my capability is the **HPower** production platform. I engineered the backend APIs using Node.js to manage booking and order workflows, dynamic coupon systems, and secure payment integrations. I built real-time notifications with Socket.IO, developed the React/Next.js administrative dashboards, and integrated the complete API surface with a Flutter mobile application. I managed the complete lifecycle from database design to production deployment utilizing Docker, Nginx, and PM2.

My combination of backend architecture, API engineering, frontend integration, and production deployment allows me to contribute across the full application lifecycle. I am eager to bring my expertise in full-stack architecture and optimization to your team to help build high-performance, secure applications. Thank you for considering my application.

**Sincerely,**

**Fetian Ans**
